

Features & Benefits

Anonymous Call Rejection - Stop the calls from telephones that have their number blocked. Callers must unblock their number in order to reach you.

Call Forwarding Variable - Make sure you don't miss important calls by forwarding them to any local or long distance number that you select.

Call Forward Busy - Send calls to a different number when the one the party is trying to call you on is busy. It's a great addition for those with dial-up, as your calls are forwarded while you're on the net.

Call Forward Don't Answer - Here, your calls are only forwarded after a predetermined number of rings, giving you the opportunity to pick up the call.

Call Waiting - This feature eliminates the possibility of missing important calls from family, friends or business associates. Even when you're on the phone you will still be accessible to whoever needs to reach you.

Features & Benefits

Caller ID - Identify the name and number of the caller before you answer the telephone. This feature includes Call Waiting Caller ID.

Continuous Redial - Automatically re-dials a busy number until the line becomes free.

Inside Wire Maintenance - You are responsible for wiring from the outside telephone box to each telephone jack in every room. Wire Guard is a line maintenance program that covers the telephone wiring inside your home. See our Wire Guard brochure for more info.

Last Call Return - Call back the last party that attempted to reach you with *69. Now you don't have to wonder who called.

Priority Call - This feature enables you to identify the most important calls and prioritize current or incoming calls. Set up a list of 10 numbers. Calls on your list will have a distinct ring (short-short-long). If the call is not on your list, the ring will be normal.

Features & Benefits

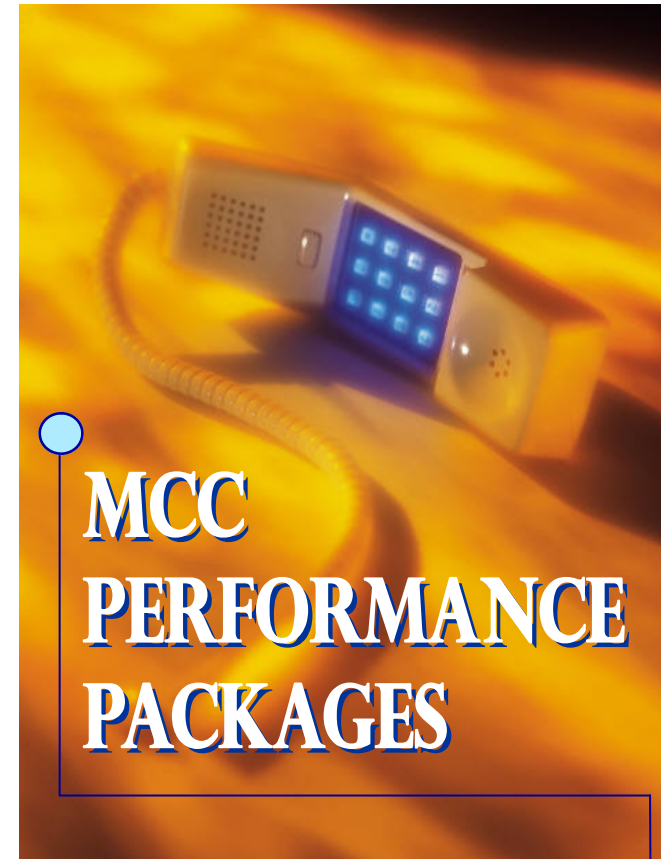

Selective Call Forwarding - Gives you the ability to create a list of phone numbers that are to be forwarded.

Selective Call Rejection - Allows you to create a list of up to 6 pre-selected telephone numbers. Incoming calls from those numbers will be blocked. A recorded message tells the caller you are not presently accepting calls.

Speed Dial 30 - Make calling fast and easy by storing up to 30 frequently called numbers. Simply assign a 2 digit code to your important, frequently called numbers.

Three-way Calling - This feature lets you turn a two-way phone call into a three-way conversation. You and two other people can conference at the same time.

Voice Mail - Whether you're on the phone or on the go, make sure you get those important calls, no matter where you are. Create a personal greeting up to 2 minutes long. Receive messages up to 5 minutes long. Save up to 25 messages for 2 weeks. Access your messages anytime day or night.
